ADCA MASTER PROGRAM

Complete Intro Video — Recording-Ready Script

59 CODE
Advanced Diploma in Computer Applications

Recommended Duration: 5–7 minutes
Format: Face + PPT + Screen/B-roll

Purpose

The first lesson should create curiosity, explain the learner’s problem, introduce the ADCA journey, set practical expectations, and motivate the student to begin. Do not spend the opening minutes reading the syllabus.

SCENE 1 — THE HOOK

TIME: 0:00–0:20

Imagine you have a computer in front of you… but someone asks you to create an Excel salary sheet, make a professional resume, enter accounts in Tally, design a poster, or build a simple website.

Would you be able to do it confidently?

If your answer is “maybe not”… that is exactly why you are here.

Welcome to the ADCA Master Program.

ON SCREEN: Computer □□□□□ ≠ Computer Skills □□□□
VISUAL: Fast cuts: Excel • Tally • Resume • Design • Website

SCENE 2 — THE STORY

TIME: 0:20–0:55

Let me give you a simple example.

Imagine a student named Rahul. Rahul knows the basics of using a computer. He can open files, browse the internet, type a document, and watch videos.

But one day, he is asked to prepare an Excel report. Then he is asked to create a

professional document. Then he is asked to make an accounting entry in Tally.

Suddenly, he feels stuck.

The problem is not that Rahul cannot use a computer.

The problem is that he does not have enough practical computer skills.

And that is the gap we are going to work on in this course.

DELIVERY: Conversational. Slow down on “The problem is…”
VISUAL: Simple office-work situations.

SCENE 3 — WHAT IS ADCA?

TIME: 0:55–1:30

ADCA stands for Advanced Diploma in Computer Applications.

But in this course, our focus is not simply on memorising definitions or completing chapters.

We are going to build practical skills step by step.

We will start from computer fundamentals, then move into MS Office, internet and email skills, typing, accounting with Tally, graphic designing, programming fundamentals, web designing, and practical projects.

Learn the concept. Practice it. Apply it.

ON SCREEN: ADCA = Advanced Diploma in Computer Applications
ROADMAP: Basics → Office → Tally → Design → Programming → Web → Projects

SCENE 4 — WHAT WILL YOU BE ABLE TO DO?

TIME: 1:30–2:15

Our goal is not just to finish videos.

By the end of the relevant modules, you should have practical exposure to creating professional documents, working with spreadsheets, preparing presentations, using internet and email tools, understanding computerized accounting, creating basic designs, understanding programming concepts, and building a simple web project.

Most importantly, you will have opportunities to practice these skills through assignments and projects.

Knowing a topic and being able to use it are two different things.

ON SCREEN: Create • Calculate • Design • Manage • Build
NOTE: Avoid promising guaranteed employment or salary.

SCENE 5 — LEARNING METHOD

TIME: 2:15–2:50

One thing I want to make clear from the beginning:

Do not just watch this course.

For every important topic, follow four steps: Watch the lesson. Practice it yourself. Complete the assigned task. Then apply the skill in a project.

Because computer skills are not developed by watching alone.

They are developed by doing.

ON SCREEN: WATCH → PRACTICE → ASSIGNMENT → PROJECT
SIGNATURE LINE: “Computer skill dekhne se nahi, karne se aati hai.”

SCENE 6 — YOUR ADCA ROADMAP

TIME: 2:50–3:40

Here is your complete learning journey.

First, we will build your Computer Fundamentals. Then we will learn MS Word, Excel and PowerPoint. After that, we will cover Internet and Email skills and typing. Next comes Tally and computerized accounting. Then we move into graphic designing. After that, we will understand programming fundamentals. Then we will enter the world of web designing. And finally, we will bring everything together through practical projects, assessment and course completion.

VISUAL: 01 Fundamentals → 02 Word → 03 Excel → 04 PowerPoint/Internet → 05 Typing → 06 Tally → 07 Design → 08 Programming → 09 Web → 10 Projects

SCENE 7 — CAREER & PRACTICAL USE

TIME: 3:40–4:20

So where can these skills be useful?

They can support entry-level work involving computer operations, office documentation, data handling, spreadsheets, accounting software, basic graphic design, and basic web work.

But remember: completing a course does not automatically guarantee a job.

Your opportunities will also depend on your actual skills, practice, communication, qualifications, experience, and the requirements of the role.

That is why our focus here is practical learning—not just a certificate.

ON SCREEN: Computer Operations • Office Work • Excel • Tally • Design • Basic Web Work
TRUST MESSAGE: Skills first. Certificate second.

SCENE 8 — YOUR INSTRUCTOR

TIME: 4:20–4:50

If you are watching this for the first time, I'm Sonu Sagar, and I create technology, computer-skills and practical-learning content through 59 Code.

In this ADCA course, I will try to keep the lessons simple, step-by-step and practical, so that you can follow along on your own computer.

You do not need to be an expert before starting.

You just need a computer, regular practice, and the willingness to learn.

CAMERA: Face-to-camera
LOWER THIRD: Sonu Sagar | 59 Code

SCENE 9 — HOW TO TAKE THE COURSE

TIME: 4:50–5:25

Here is how I recommend you take this course.

Keep your computer ready. Watch one lesson at a time. Pause whenever you need to practice. Complete the task before moving to the next lesson. And whenever a project is given, build it yourself instead of simply copying the final result.

If you follow this process consistently, you will get much more value from the course.

ON SCREEN: 1. Watch → 2. Pause & Practice → 3. Complete Task → 4. Build Project

SCENE 10 — FINAL MOTIVATION

TIME: 5:25–6:00

So, if you want to do more than just operate a computer…

If you want to understand the tools that are used in real-world computer work...

And if you are ready to learn, practice and build step by step...

Welcome to the ADCA Master Program.

From the very next lesson, we will start from the basics. You do not have to know everything today. You just have to start.

Welcome to ADCA. Welcome to 59 Code.

FINAL SCREEN: ADCA MASTER PROGRAM

RECORDING & EDITING GUIDE

Keep the first 20 seconds fast and visually active. Change the visual every few seconds where possible: face → text → screen recording → B-roll → face. Use light background music, but keep the voice clearly dominant.

PPT / ON-SCREEN TEXT PACK

SCREEN	TEXT
HOOK	Computer □□□□□ ≠ Computer Skills □□□□
COURSE TITLE	ADCA MASTER PROGRAM Advanced Diploma in Computer Applications
CORE PROMISE	LEARN → PRACTICE → APPLY

LEARNING METHOD	WATCH → PRACTICE → ASSIGNMENT → PROJECT
CAREER SKILLS	Computer Operations • Office • Excel • Tally • Design • Basic Web
FINAL	LEARN • PRACTICE • BUILD • GROW 59 CODE

FINAL RECORDING CHECKLIST

☐ Record in 1080p or higher; keep the face camera at eye level.

☐ Use a clean microphone recording and make a short test before the full take.

☐ Use subtitles for the hook, roadmap and final message.

☐ Keep music low enough that every word remains clear.

☐ Do not make employment, salary or guaranteed-result claims.

☐ End with a clean title card and a clear transition into Lesson 1.
